Acknowledgments

Special thanks go to Rachel Noble of the Defense Manpower Data Center (DMDC), and to Sally Mohamed (American University, Consortium Research Fellows Program) for their guidance. Much deserved thanks go to Laverne Wright, Elizabeth Willis, Timothy Elig (all of DMDC), and the rest of the DMDC Survey Division staff for contributing their expertise. Thanks also go to Capt. Gwen Rutherford for her guidance while in the Office of Accession Policy (OASD/FMP/MPP). Thank you also to the DMDC Survey Division Consortium Research Fellows and the DHRA Joint Advertising, Market Research and Studies staff who contributed assistance in ensuring data quality control.

Data collection and dataset preparation for the *2000 Military Recruiter Survey* were performed by Westat under contract M67004-98-D-0002/0019. Data processing and production of these tabulations of responses were performed by Westat under contract M67004-98-D-0002/0022.

TABULATIONS OF RESPONSES FROM THE 2000 MILITARY RECRUITER SURVEY

Preface

The Defense Manpower Data Center (DMDC) conducted the first *DoD Recruiter Survey* in 1989 and subsequent surveys in 1991, 1994, 1996, 1998 and 2000. The Defense Human Resources Activity became involved with the *Recruiter Survey* during the 2000 administration.

The core content of the *Recruiter Survey* covers recruiters' perceptions of (1) selection, training, and development procedures; (2) quality of life on and off the job; (3) job satisfaction and goal achievement; (4) organizational leadership, including reasonableness of goals/missions; (5) pressures to reach goals and rewards for doing so; (6) support in the form of recruitment advertising, incentives to attract qualified prospects, and adequate offices and equipment; and (7) improprieties in recruiting.

Survey Methodology

Survey Design

The *Recruiter Survey* is updated for each administration. Questions are rewritten to improve clarity, dated items are removed from the survey, and new items are added to ensure that the survey meets the changing needs of policy makers and program managers (Zucker, 2001). For example, in the 2000 survey, items about computer and Internet use, job stress, recruiting offices, and the possibility of using civilian contractors to assist recruiters were expanded. Items were also added to assess recruiters' satisfaction with schools, availability of childcare, and spousal employment opportunities in assigned duty areas.

The survey items were grouped into 13 sections in the instrument:

- Assignment Information
- Supervision
- Housing/Residence
- Satisfaction
- Your Workplace
- Medical
- Training
- Computer Usage
- Goal/Mission
- Background Information
- Job Demands
- Comments Section
- Resources

A copy of the *2000 Military Recruiter Survey* (MRS) final instrument is provided in Appendix A. The survey instrument contained 102 survey items and was printed on 20 pages including cover, instructions and a privacy act statement.

Survey Administration

Complete details of the survey administration and dataset creation are reported in the *2000 Military Recruiter Survey: Administration, Datasets, and Codebook* (Zucker, 2002).

Letters were sent on November 1, 2000 notifying the sample that the survey would be sent in a few weeks. Following notification letters by about 2 weeks, surveys were mailed November 16-22, 2000 to 10,115 recruiters. Reminder letters were sent on December 1, 2000. A second survey was mailed on December 15, 2000 to sample members who had not returned their completed surveys. The survey field closed on February 9, 2001.

Survey Population

The sampling frame, from which a 44-percent sample was drawn, consisted of all military members identified by each of the ten Services and Components as recruiters. Those surveyed included recruiters from: the Active Component (Army, Navy, Marine Corps, Air Force and Coast Guard) and the Reserve Component (Army Reserve, Army National Guard, Naval Reserve, Air Force Reserve and Air National Guard). The population of interest for analysis and these tabulations of responses was enlisted recruiters with goals/missions and at least one year of recruiting duty experience.

The number of returned, usable forms totaled 5,639, or 56 percent of the sample. However, all 23 officer forms were removed and 910 of the forms came from individuals who did not meet one or both of the two eligibility criteria of (1) recruiting goals/missions, and (2) having at least one year of recruiting experience. These 933 forms were excluded, leaving data from 4,706 recruiter forms in the sample for analysis. The tabulations of responses are based upon this sample.

Analytic Procedures

Estimation Procedures

Surveys were returned by 24% of the total eligible population of recruiters and thus the data required weighting to produce population estimates. For more information on weighting, see the *Weighting Report for the 2000 Military Recruiter Survey* (Flores-Cervantes, Valliant, George & Zucker, 2002).

Because the survey data were weighted, standard statistical software packages may be inappropriate for computing standard errors, variances, or tests of statistical significance. For this report, variance estimates were calculated using WesVar[®], a software application specifically designed to provide valid statistical estimates for complex surveys. WesVar uses replication methods for variance estimation.*

The survey data most likely contain error similar to the sampling error occurring in sample surveys when data are obtained from only a fraction of the population. Standard errors are estimates of the random variation around population parameters such as a percentage or mean. Estimates in these tabulations of responses are percentages and are reported with 95% confidence intervals.

Estimates in these tabulations of responses have Wilson upper/lower limit confidence intervals, which are asymmetric (Wilson, 1927; Newcombe, 1988). The Wilson confidence interval sets a lower bound of 0% and an upper bound of 100%. This means that, if the lower symmetric confidence interval for a small percentage would normally include a negative number, the lower Wilson confidence interval does not go below zero. Likewise, if the upper symmetric confidence interval for a large percentage would exceed 100% using the standard approach, the Wilson method limits the upper interval to 100. Wilson confidence intervals are displayed in parentheses below each point estimate.

Subgroups

Survey results in these tabulations of responses are for Active and Reserve Component recruiters by Service/Component and by geographical area

* Replication is an empirical method of establishing sample variation by drawing repeated subsamples from the obtained sample and comparing the results to those obtained for the full sample. Replication methodology produces variance estimates very close to those produced using Taylor series linearization methodology, the main alternate method of variance estimation.

for some Services. There were two variables for Service/Component (TSVC and SRSVC) that could have been used as a crossing variable in these tabulations of responses.

TSVC: To create the sample frame, each Service/Component recruiting command was asked to send a list of all their recruiters. These lists were combined and used as the basis for drawing the random sample of recruiters used in the study. The TSVC variable was created from the original lists of recruiters provided by the recruiting commands.

SRSVC: Item 1 in the *2000 Military Recruiter Survey* asks recruiters their branch of Service/Reserve Component. SRSVC is created from this survey-reported item in the survey.

As Tables 1.1 through 1.4 in these tabulations of responses show, there is some inconsistency between TSVC (the Service/Component variable obtained originally from the recruiting command lists) and SRSVC (the survey-reported Service/Component variable). TSVC was deemed to be highly error-proof since the TSVC variable came from each Service/Component's list of recruiters and the lists proved to be accurate (the surveys were received completed). Similarly, we decided the risk of respondent error on SRSVC was likely greater. Because of this, we decided to use TSVC rather than SRSVC as the crossing variable for these tabulations of responses.

Most of the questions in the *2000 Military Recruiter Survey* are represented in these tabulation of responses. Table numbers correspond with survey item numbers. For example, results for item 22a are represented in Tables 22a.1 through 22a.4.

There are four tables for each question or item, with different subgroups represented in each of the four tables. Subgroups were constructed as follows:

- Table #.1: Recruiters by Active Component. The first table of each series breaks out active Component recruiters by Service. There is a total column for all active Components and a total column for DoD Services (excluding the Coast Guard, which is part of the Department of Transportation).
- Table #.2: Recruiters By Reserve and Guard Component. The second table breaks out Reserve Component recruiters by Component.

- Table #.3: Army Recruiters by Location. The third table of each series breaks out active duty Army recruiters by five geographical regions established by the US Army Recruiting Command. The numbers in the total column for the Army in Table #.3 match the numbers in the Army column in Table #.1.

- Table #.4: Navy or Marine Corps Recruiters by Location. The fourth table breaks out active duty Navy recruiters by four geographical regions established by the Commander, Navy Recruiting Command. This table also breaks out active duty Marine Corps recruiters by two geographical regions established by the US Marine Corps Recruiting Command. The numbers in the total column for the Marine Corps in Table #.4 match the numbers in the Marine Corps column in Table #.1.

The numbers in the Active Navy total column in Table #.4 do not match the numbers in the Navy column in Table #.1. This is because the Navy column in Table #.1 includes recruiters from the Navy Recruiting Command's headquarters. The headquarters recruiters are not located at any of the four recruiting areas broken out in Table #.4 and therefore are not included in the Active Navy Total column in Table #.4.

Data Suppression

Unstable estimates in table cells were suppressed or annotated. Estimates may be unstable because of a small sample size for that cell or large variance in the data or weights. The following rules were used:

- A cell estimate was not published if the unweighted denominator size (i.e., column size) was less than 30. These cells are annotated "NR" (Not Reported).
- A cell estimate was published with an asterisk if the unweighted denominator size was 30 to 59.
- A cell estimate was published with an asterisk if the relative standard error for that estimate was 30% or greater.

When a cell estimate is reportable (i.e., unweighted denominator size greater than or equal to 30), a cell estimate greater than 0.0 and less than .05 is reported as 0.0.

Confidence intervals are reported as "NR" when the unweighted denominator size (i.e., column size) is less than 30. Confidence intervals are reported as "N/A" when the cell estimate is equal to 0% or 100%.

Important Information About the Tabulations of Responses

Volume 1 contains tabulations for *2000 Military Recruiter Survey* items 1 through 56. Volume 2 contains tabulations for the *2000 Military Recruiter Survey* items 57 through 97.

Estimates in these tabulations of responses are percentages and are reported with 95% confidence intervals. Wilson confidence intervals are displayed in parentheses below each point estimate.

Most of the questions in the *2000 Military Recruiter Survey* are represented in the tabulation of responses. Table numbers correspond with survey item numbers. For example, results for item 22a are represented in Tables 22a.1 through 22a.4.

The numbers in the "Estimated Population" section at the top of each table are weighted to represent the total number of enlisted production recruiters with at least one year of experience as of Summer 2000. Please note that in the "Estimated Population" rows of the tabulations, especially the "Not Responding on Item" row, individual column numbers may not sum to the Total column numbers due to rounding. Because of this, a footnote was added to each table stating: "Note: Rounding of Estimated Population numbers may result in discrepancies between columns."

Agreement That in the Right Mall, With a Good Design, the Station Would Reflect Well on the Military and Generate New Leads: Recruiters by Reserve and Guard Component

63b. DoD is evaluating putting recruiting stations in large enclosed malls. These stations would have attractive "storefronts" to attract visitors and computer terminals with information about military careers and benefits. They would also have administrative assistants who would assist all Services. How much do you agree or disagree with the following statements? 2000 Military Recruiter Survey

2000 MILITARY RECRUITER SURVEY

The purpose of the 2000 survey is to ask experienced production recruiters their views on key issues that affect the quality of their work lives. The questions ask about management support, training, working conditions and stress. A similar questionnaire was given five times before (1989, 1991, 1994, 1996 and 1998) and is being fielded this year to (1) track changes, (2) adjust policies and procedures, and (3) direct resources toward improving the working conditions and effectiveness of military recruiters. Therefore, it is important that you fill this survey out honestly.

INSTRUCTIONS FOR COMPLETING THE SURVEY

- THIS IS NOT A TEST, SO TAKE YOUR TIME.
- Select answers that best fit you.
- Use pencil or pen to complete the survey. Make your marks dark so that they are easily read.
- Note that sometimes you will be asked to mark only one response and sometimes, you may be asked to mark all that apply.
- Fill in the appropriate answer.
- To change an answer using pencil, erase the wrong answer completely and fill in the correct answer.
- To change an answer using pen, put an "X" through the wrong answer and fill in the correct answer.

CORRECT ANSWER

INCORRECT ANSWER

Answers to some questions will be on a 5-point scale.

Example:

To what extent do you agree or disagree with the following statements about your office?

	Strongly disagree	Disagree	Neither agree nor disagree	Agree	Strongly agree
My recruiting office presents a professional environment for potential applicants.....	①	●	③	④	⑤

Sometimes you will be asked to choose one answer for yourself and one for your family member. When this instruction appears, select one answer in each column.

Example:

At your current duty assignment, what type of treatment facility do you and members of your family usually go to when sick or in need of health advice? Please mark one answer in each column.

	Yourself	Members of your family
A military clinic or hospital....	①	①
Off-base, DoD contracted clinic (e.g., PRIMUS).....	●	②
A civilian clinic or doctor (not contracted by DoD).....	③	●
Some other type of treatment facility.....	④	④
Not applicable, haven't needed medical care at my current duty assignment.....	⑤	⑤
